

Press release, August 28, 2019

Evry, France and Moreton-in-Marsh, United Kingdom

## Enalees and Nimrod announce their partnership to introduce Enalees' veterinary products in the UK and Republic of Ireland

Maximizing the potential of Enalees' breakthrough point-of-care technology demands a thorough knowledge of the veterinary field and unmet needs, which Nimrod will bring to the table, together with a unique view of the British and Irish markets and the ability to support Enalees' product launches, sales and distribution.

Enalees' tests are designed to diagnose equine infectious diseases directly in the clinic or in the field, without the need to send samples to an external laboratory. A first panel of tests was launched in France beginning of 2019 for respiratory disease, and a second panel of tests was launched at the spring for isolated fever syndrome diseases. A few months after the launch, more than 30 veterinary equine French clinics already use these tests, all under the "Epona" brand name ([www.enalees.com](http://www.enalees.com)). Enalees' tests are based on a molecular analysis that identifies the targeted microbial DNA. They provide a result that is as sensitive and specific as molecular PCR tests, and can be performed at the veterinary clinic or in the field within 40 minutes, allowing veterinary surgeons to expedite diagnosis and treatment of the animal.

Enalees, founded in 2015 by experts in the development of molecular diagnostics tests and European veterinary markets, has developed a unique technology platform for point-of-care equine molecular diagnostic testing. **Laurent Thiery, PhD, CEO & Co-Founder of Enalees**, points out how the company is currently planning future product developments: *"On the basis of the know-how and experience we have acquired from our equine products, Enalees will soon launch additional assays for cats and dogs, on the same system"*.

Nimrod Veterinary Products is a leading supplier of veterinary pharmaceuticals to equine hospitals and other veterinary practices in the UK and Ireland, with sales of £2.8 million in 2018. It was founded in 2007 by David Renney, a veterinary surgeon with experience in mixed practice and a long career in the veterinary pharmaceuticals industry. Nimrod also manufactures veterinary equipment and clinical-nutrition products for cattle, sold under its Selekt brand. It is the global leader in this field, with sales in 19 countries, and has recently extended its Selekt range with new products for horses.

**D. J. Renney, CEO and founder of Nimrod Veterinary Products**, said *"Our business model is to make or find novel tools for the veterinary surgeon, particularly ones that will benefit from our expertise and technical support. The Epona tests fulfil those criteria perfectly. They will make it easier for vets to help clients control infectious diseases, and offer a new business opportunity for practices."*
